Cast Stone

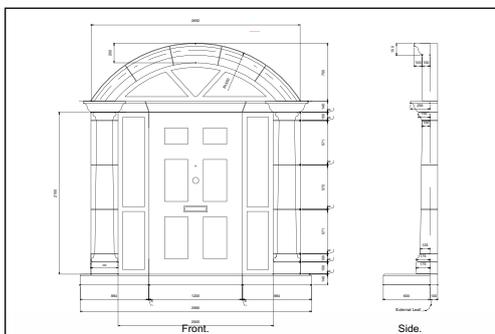

First Choice Solutions for Architects, Specifiers & Contractors

Procter Cast Stone Service

Dependable nationwide service, providing high quality cast stone to architects and contractors.

1. Technical Consultation

Procter's technical staff provide free consultation to specifiers to assist in the selection and design of cast stone features. Early involvement of our staff in project planning ensures the successful incorporation of cast stone features to suit customers aesthetic, performance and budget parameters, as well as scheduling deliveries to suit site programme requirements.

2. Custom Design Service

Procter specialize in the manufacture of individually designed cast stone features to meet customers particular project requirements. In addition we offer a comprehensive range of standard caststone products.

3. Detailed Quotation

Fully detailed, quotations are provided from architects designs or bills of quantity. Budget prices can also be provided.

4. Colour Range

A range of standard colours are available to match most natural stone shades. These include Yorkshire; Light Yorkshire; Dark and Light Portland; Aire, Red Sandstone and Natural. We also make products in non-standard colours, to match existing materials. Free colour sample packs are available on request.

5. Weathering

Like natural stone, cast stone products will weather over time. Factors influencing this include climate, location and architectural detailing. There is the possibility of efflorescence, which may cause temporary lightening of colour.

6. Production

The manufacture of cast stone products is carried out in our factory at Garforth in West Yorkshire under closely controlled conditions to ensure consistent high quality standards of production and curing.

7. Packing and Delivery

All Procter cast stone products are subject to final inspection checks, carefully packed shrink wrapped on pallets with suitable protective materials and delivered to site by our own vehicles to ensure they arrive in good condition.

8. Installation

Each consignment of cast stone products is supplied complete with handling instructions, to minimize the risk of damage by site personnel. For larger units lifting eyes can be installed, dependent on customer requirements to facilitate safe lifting. Other fixings can be cast in where required.

Retail

8. Specially coloured caststone entrance features

ENT

Our Company

Established in 1740, Procter's is still a family owned company. Today's business specializes in concrete products, security fencing, machine guarding and pest control products including the famous Little Nipper mousetrap. The concrete products division, established for over fifty years, makes precast and prestressed lintels, padstones, bollards, concrete fence posts, including coloured, non-standard concrete products, and specialist cast stone products.

Benefits of Cast Stone

Cast stone or reconstituted stone is an attractive, very cost effective alternative to quarried stone. Architectural designs can be reproduced in cast stone to create a wide range of decorative features to enhance new buildings or match natural stonework for sympathetic restoration.

Our Quality Standards

Craftsmen manufacture all Procter cast stone products in-house. All our products are manufactured generally in accordance with BS1217: 1997

Stock Components

Ranges of selected standard components are held in stock for immediate delivery. These include heads, cills, copings and pier caps. We also manufacture customers requirements on larger jobs and hold on stock for call off to suit their site programme.

Bespoke Designs

Procter Cast Stone specializes in meeting the individual requirements of architects and specifiers through its bespoke manufacture service. With our in-house mould making facility we can recreate a vast range of simple and ornate stonework designs to enhance the aesthetic impact of the completed project.
